

New College of Florida Heiser Natural Sciences Building

📍 Bradenton, Florida

PROJECT OVERVIEW

Under a continuing services contract, we worked to significantly enhance the NCF Heiser Natural Sciences Building throughout various areas of the facility. These changes included interior design remodeling, repositioning of doors, replacement of flooring, repainting of walls, and installation of marker boards. Additionally, adjustments to interior partitions, ceilings, and systems were made to accommodate new furniture arrangements, alongside ensuring adequate electrical and data connectivity.

The project also encompassed the installation of HVAC equipment better suited to the needs of the student and teacher population, including cabinets with sinks, improvement of plumbing infrastructure, relocation of equipment, and execution of minor repairs throughout the rooms. All renovations aimed to optimize the functionality and aesthetics of the building, providing an improved environment conducive to academic activities for students and faculty members alike.
